

### Find the Word by Phi

Clues are presented in alphabetical order *of clue*, and only the first half of the alphabet is used for the initial letters of clues. Each initial letter refers to a different column of the grid, which is the column in which the answer to the clue begins, but whether Across or Down is for the solver to determine (wordplay should *not* be taken as indicating one or other direction). The grid has 90° symmetry. One entry is unclued, and has several possible answers – solvers must observe the allocation of initial letters to columns to determine the correct one.

A lingering figure, given variation form in reel and trio  
Articles for present purposes displayed in computer image with flowing water
